

Fir Tree PTA Easter Madness
The "Egg Drop" Challenge
Have fun with this 'egg-citing' challenge
and help raise funds for Fir Tree PTA

Goal: Build a protective contraption or container using materials that prevent a raw egg from breaking when dropped from a height. (Starting height = 1metre)

1. You will need a raw egg. Other material ideas for making your container or contraption: e.g., paper tubes, tape, bubble wrap, cotton balls, straws, plasticene, boxes, cloth, paper, foam etc... Please note - no helium balloons allowed.
2. Design your contraption / container at home. (Maybe have some fun trying out some prototypes with egg substitutes first!)
3. Bring your raw egg, contraption and £1 entry fee into school on Thursday March 26th for testing.

If an egg survives the first height dropped, subsequent drops can be from increasing heights.

Winners will receive an Easter egg
